

# How Can We Understand the Paradox of Birth Control Promotion and Humanoid Robotics Advancement?

Sixbert SANGWA • October 13, 2024

In our contemporary world, we observe a perplexing juxtaposition: global elites and influential organizations are promoting birth control while simultaneously investing heavily in the advancement of humanoid robotics and artificial intelligence. This apparent paradox prompts significant questions for Christians: Why is there a push to reduce the human population through various birth control measures, even as a parallel effort seeks to develop technologies that mimic human abilities? To address these concerns, we must explore the motives behind these trends, the potential spiritual implications, and the connection to the agendas of powerful globalists. We will also see how this aligns with the age-old struggle of Satan to usurp God's creation, as evidenced through the words of influential figures like Yuval Noah Harari, who expresses desires that reflect not just his own ambitions but the broader plan of elites driving this agenda.

## The Rise of Humanoid Robots: Technological Breakthroughs and a New Vision for Humanity

In recent years, advances in robotics and artificial intelligence have revolutionized the way we understand human-machine interactions. Humanoid robots, designed to replicate human appearance, movement, and even emotional responses, are increasingly utilized in roles traditionally occupied by humans. Companies and research institutions in places like Silicon Valley are developing robots that can perform tasks ranging from healthcare and customer service to manufacturing and companionship. These robots are equipped with sophisticated algorithms and sensory capabilities, making them capable of learning and adapting to human behaviors.

This technological surge is championed by figures such as Klaus Schwab, founder of the World Economic Forum (WEF). Schwab has outlined his vision for the future in his book, *The Fourth Industrial Revolution*, where he discusses the merger of digital, biological, and physical worlds as a pivotal shift in human history ([Schwab, 2016](#)). He states, *"The Fourth Industrial Revolution will lead to a fusion of our physical, digital and biological identity"* ([Schwab, 2016](#)). Schwab's vision highlights the drive to integrate human and machine, not just for efficiency, but as part of a broader transformation of society, where technological control over human biology is central to the agenda.

Similarly, Harari, an influential thinker closely associated with the WEF, has been candid about the ambitions of the technological elite to reshape humanity. In a 2017 interview, Harari boldly stated: *"Science is really about transforming humans into gods. And I mean this in the most literal sense possible. We want to gain these powers. If you think about the Bible, for example. So in the first book of Genesis, what God does is to create animals and plants and humans, and we now want to gain this ability to ourselves, and we even go beyond God"* ([Harari, 2017](#)). His words reflect not just a personal vision but align with the broader agenda of global elites, who see technological transformation as a means to transcend the limits placed by God, positioning themselves as creators of a new form of humanity.

## The Role of Medicine, Vaccines, and Nanotechnology in the Elites' Agenda

To fully understand this vision, we must delve into how global elites plan to use advances in medicine, biotechnology, and nanotechnology as instruments to reshape humanity. These are not isolated developments but are integral to a larger plan that seeks to control populations and eventually merge human beings with technology.

**Nanotechnology and Nanobots:** A key area of development in this agenda is nanotechnology—particularly the use of nanobots, microscopic robots that can operate inside the human body. These tiny machines can be designed to deliver targeted drug treatments, monitor biological processes, or even alter DNA at a cellular level. While these technologies are often promoted for their potential to treat diseases and extend life, they also open the door to unprecedented control over the human body. With the ability to remotely program or influence nanobots within the body, those who control this technology could, in theory, monitor and manipulate human biology on an intimate level.

This potential for control aligns with the broader ambitions of globalist figures like Bill Gates, who has been a significant proponent of digital health and vaccination technologies. Gates has invested in vaccine platforms and digital ID initiatives that would integrate biometric data, which he argues are necessary for tracking and managing global health ([Gates, 2020](#)). This effort, while framed as a humanitarian endeavor, raises concerns about privacy, autonomy, and the potential for abuse of such technology.

Harari also echoed similar sentiments when he discussed the merging of digital and biological revolutions, emphasizing that *"the revolution in computer science and [the] revolution in biology"* will enable new forms of control and surveillance through biometric sensors. He stated, *"Consider what it means if people constantly have biometric sensors on or inside their bodies... with such knowledge, if you have enough computing power and understanding of biology, you could know who you are better than you even know yourself"* ([Harari, 2017](#)). Such statements reveal a vision where technology enables an unprecedented level of control over human life, extending far beyond the traditional role of medicine.

**Diseases and Vaccines as Instruments of Control:** Throughout history, pandemics and health crises have been used by those in power to implement sweeping societal changes. This tendency has continued in modern times, as we have seen with the global response to pandemics like COVID-19. While many vaccines and treatments have indeed saved lives, there is also a darker aspect to these initiatives when viewed through the lens of control and manipulation.

During recent global health crises, the deployment of new vaccines has been accelerated using cutting-edge technologies, including mRNA technology. These vaccines, which can be rapidly updated and adapted, have demonstrated how quickly scientific advancements can be mobilized. However, alongside the beneficial aspects of such innovations, there are concerns that such tools could be used to introduce technologies like nanobots into the human body under the guise of public health measures. For example, nanoparticles or mRNA-based platforms could, in theory, serve as delivery systems for substances that could interact with human DNA or manipulate the immune system in ways that go beyond merely fighting diseases.

This idea is not merely theoretical. Figures like Elon Musk, who has promoted his Neuralink brain-computer interface, have acknowledged the potential for technology to monitor and even modify neural activity ([Musk, 2020](#)). While Neuralink is promoted as a means to treat neurological conditions, the potential for its use in monitoring and controlling thoughts and behavior is evident. The combination of such invasive technologies with a global health agenda raises concerns about the possibility of using medicine as a tool for population control and surveillance.

**The Use of Technology for Global Control:** The elites' vision for using medicine and technology to reshape humanity is intertwined with a broader agenda for global control. This agenda aims to transcend traditional national boundaries, instead fostering a global identity that prioritizes technological solutions over individual freedoms and spiritual truths. Harari himself has spoken of the importance of balancing a *"global identity, global loyalty, with a strengthening of local communities,"* arguing that nationalism is *"problematic and dangerous"* in the face of global challenges ([Harari, 2017](#)).

This vision, while framed as a way to unify humanity, risks concentrating power in the hands of a small group of technological elites. The tools of nanotechnology, vaccines, and AI-driven surveillance systems could be used to control not only physical health but also human behavior, all under the guise of improving society. By creating a new form of human existence—one that is increasingly merged with technology and governed by those who control it—these elites are working towards a future where the image of humanity as created by God is fundamentally altered.

## The New World Order and the Ambition to Replace Humanity

The merging of human and machine is not merely an ambition of isolated thinkers like Harari but is indicative of a broader agenda pursued by powerful elites. This agenda can be seen as part of the [New World Order](#), a concept often associated with a desire to centralize global governance, control populations, and reshape societal values. At its core, this vision seeks to create a new kind of human being—one that is biologically, neurologically, and socially engineered to align with the desires of the global elite.

Other influential voices, such as Ray Kurzweil, a prominent futurist and director of engineering at Google, have also spoken of the merging of humans and technology through a process he calls the *"Singularity."* Kurzweil envisions a future where human consciousness can be uploaded into machines, achieving a form of digital immortality ([Kurzweil, 2005](#)). His predictions align with the broader ambitions of those who see technology as a means to transcend human limitations and assume a role traditionally ascribed to God.

This agenda aligns with the age-old desire of Satan to usurp God's creation and undermine His authority. The Bible warns of a time when deception will increase, and attempts will be made to replace God's creation with man-made idols ([2 Timothy 3:1-5](#)). In this context, the rise of humanoid robots, the use of nanotechnology, and the push for a technologically enhanced form of humanity can be seen as modern manifestations of such deception. Harari's remarks about surpassing God's creation reflect the spirit of rebellion seen in Genesis 3:5, where the serpent tempted humanity with the promise of becoming *"like God"* ([Genesis 3:5](#)).

## Concluding Thoughts

In light of these developments, Christians must remain vigilant, seeking to understand these trends through the lens of Scripture and grounding themselves in the hope of Christ's return. The promotion of birth control, alongside the rise of humanoid robots and the integration of nanotechnology into medicine, reflects a broader attempt by global elites to reshape humanity, challenging God's authority and His design for life. As the Apostle Paul exhorts in [Romans 12:2](#), *"Do not be conformed to this world, but be transformed by the renewal of your mind, that by testing you may discern what is the will of God, what is good and acceptable and perfect."* This scripture reminds us to resist conforming to worldly ideologies and instead align our thinking with God's will. Jesus also reminded His disciples, *"Behold, I am sending you out as sheep in the midst of wolves, so be wise as serpents and innocent as doves"* ([Matthew 10:16](#)). By holding fast to the truth of God's Word, we can confront these ideologies with clarity and conviction, offering a message of hope that transcends the promises of technology. In doing so, we can help others understand the profound worth of human life as God's creation and remain steadfast in our commitment to His truth, even as we navigate the complex landscape of technological advancement and societal change.

Christians must also emphasize the importance of ethical considerations in the development of new technologies. While innovations can serve beneficial purposes, they should not come at the expense of the inherent worth and dignity of human life. Our response should be rooted in love and a commitment to sharing the gospel, emphasizing that true hope and eternal life come through Christ alone, not through human achievements or technological advancements.
